

A. Signature activity in pre-PEA right ventricle

Figure 5 signature; n = 36 genes

Gene-level log2 fold change

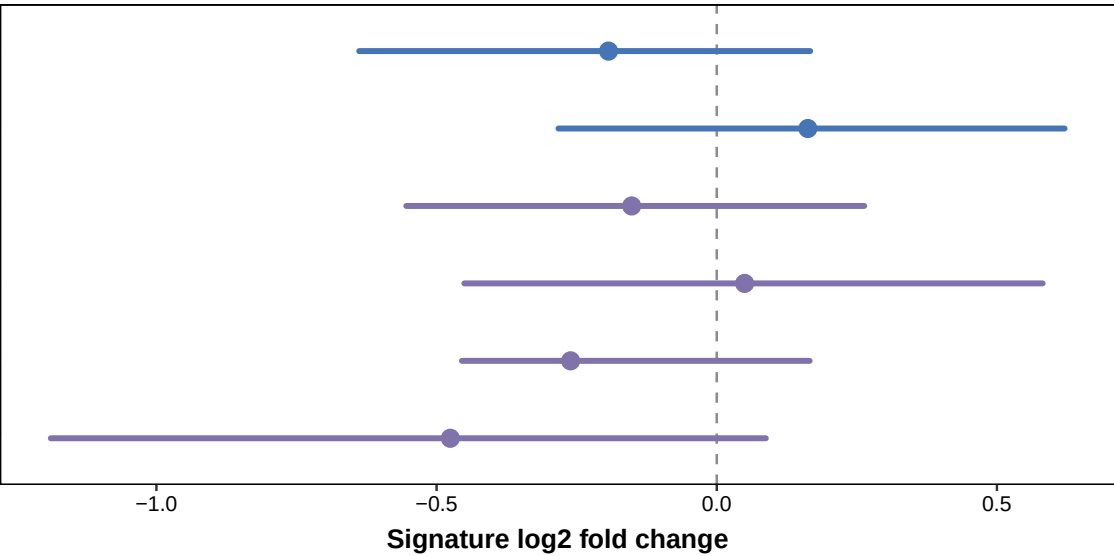

B. Regional and post-PEA-associated contrasts

Point: mean; line: interquartile range across signature genes

Regional comparison Post-PEA-associated

Pre-PEA septum vs control septum
Pre-PEA septum vs pre-PEA RV
Post-PEA septum vs pre-PEA RV
Post-PEA moderate septum vs pre-PEA moderate RV
Post-PEA intermediate septum vs pre-PEA intermediate RV
Post-PEA severe septum vs pre-PEA severe RV

C. Most recurrent CTEPH-supported genes (20/36)

All 12 contrasts; grey/NA = not reported or not estimable; * padj < 0.05, ** padj < 0.01, *** padj < 0.001
