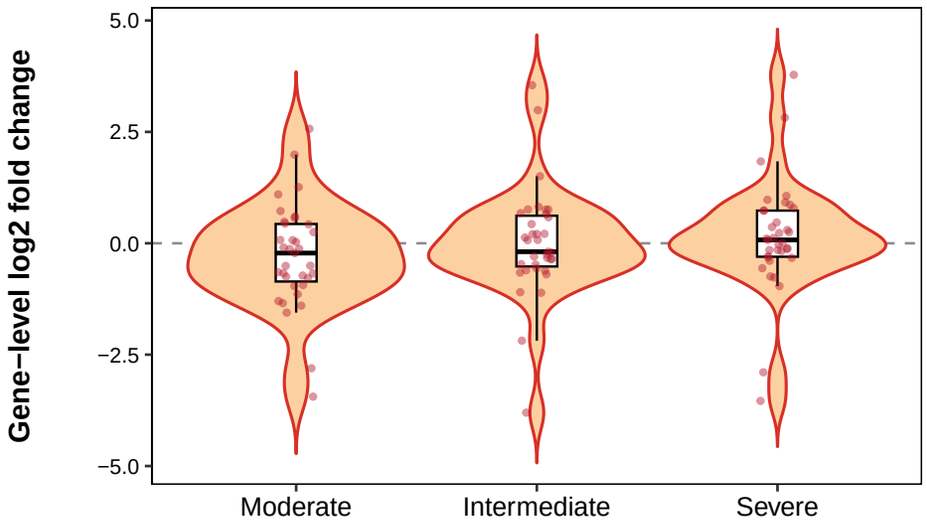
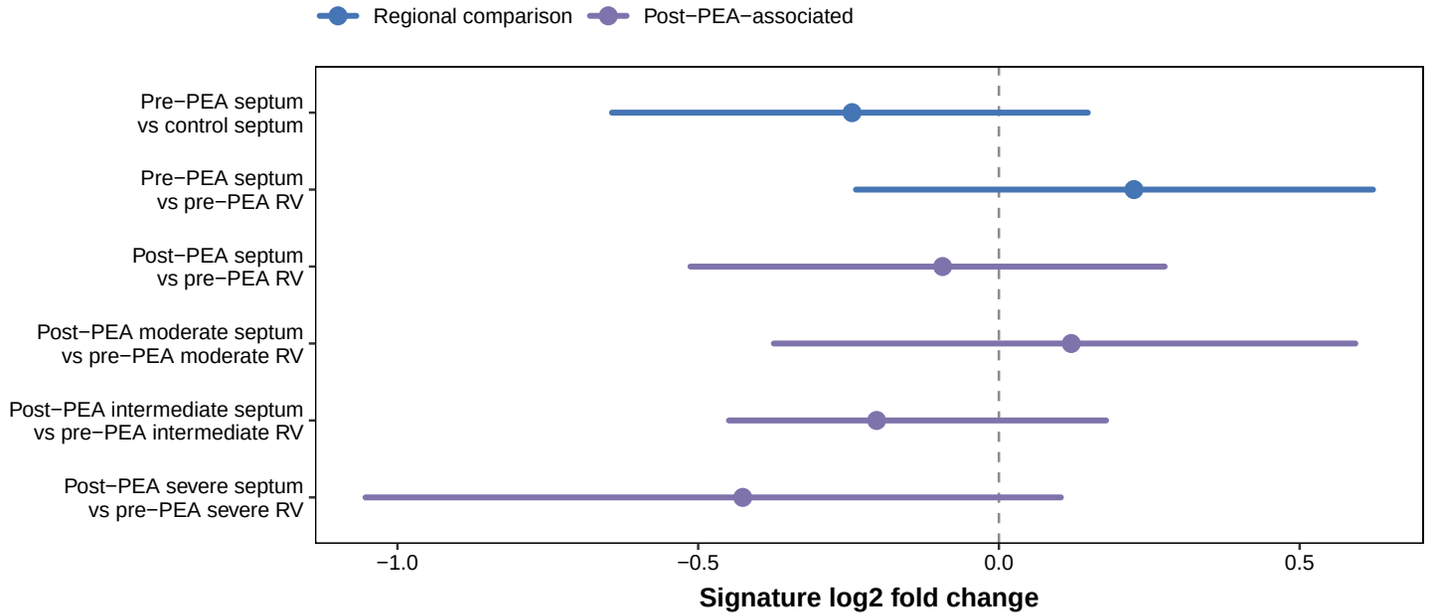
A. Signature activity in pre−PEA right ventricle

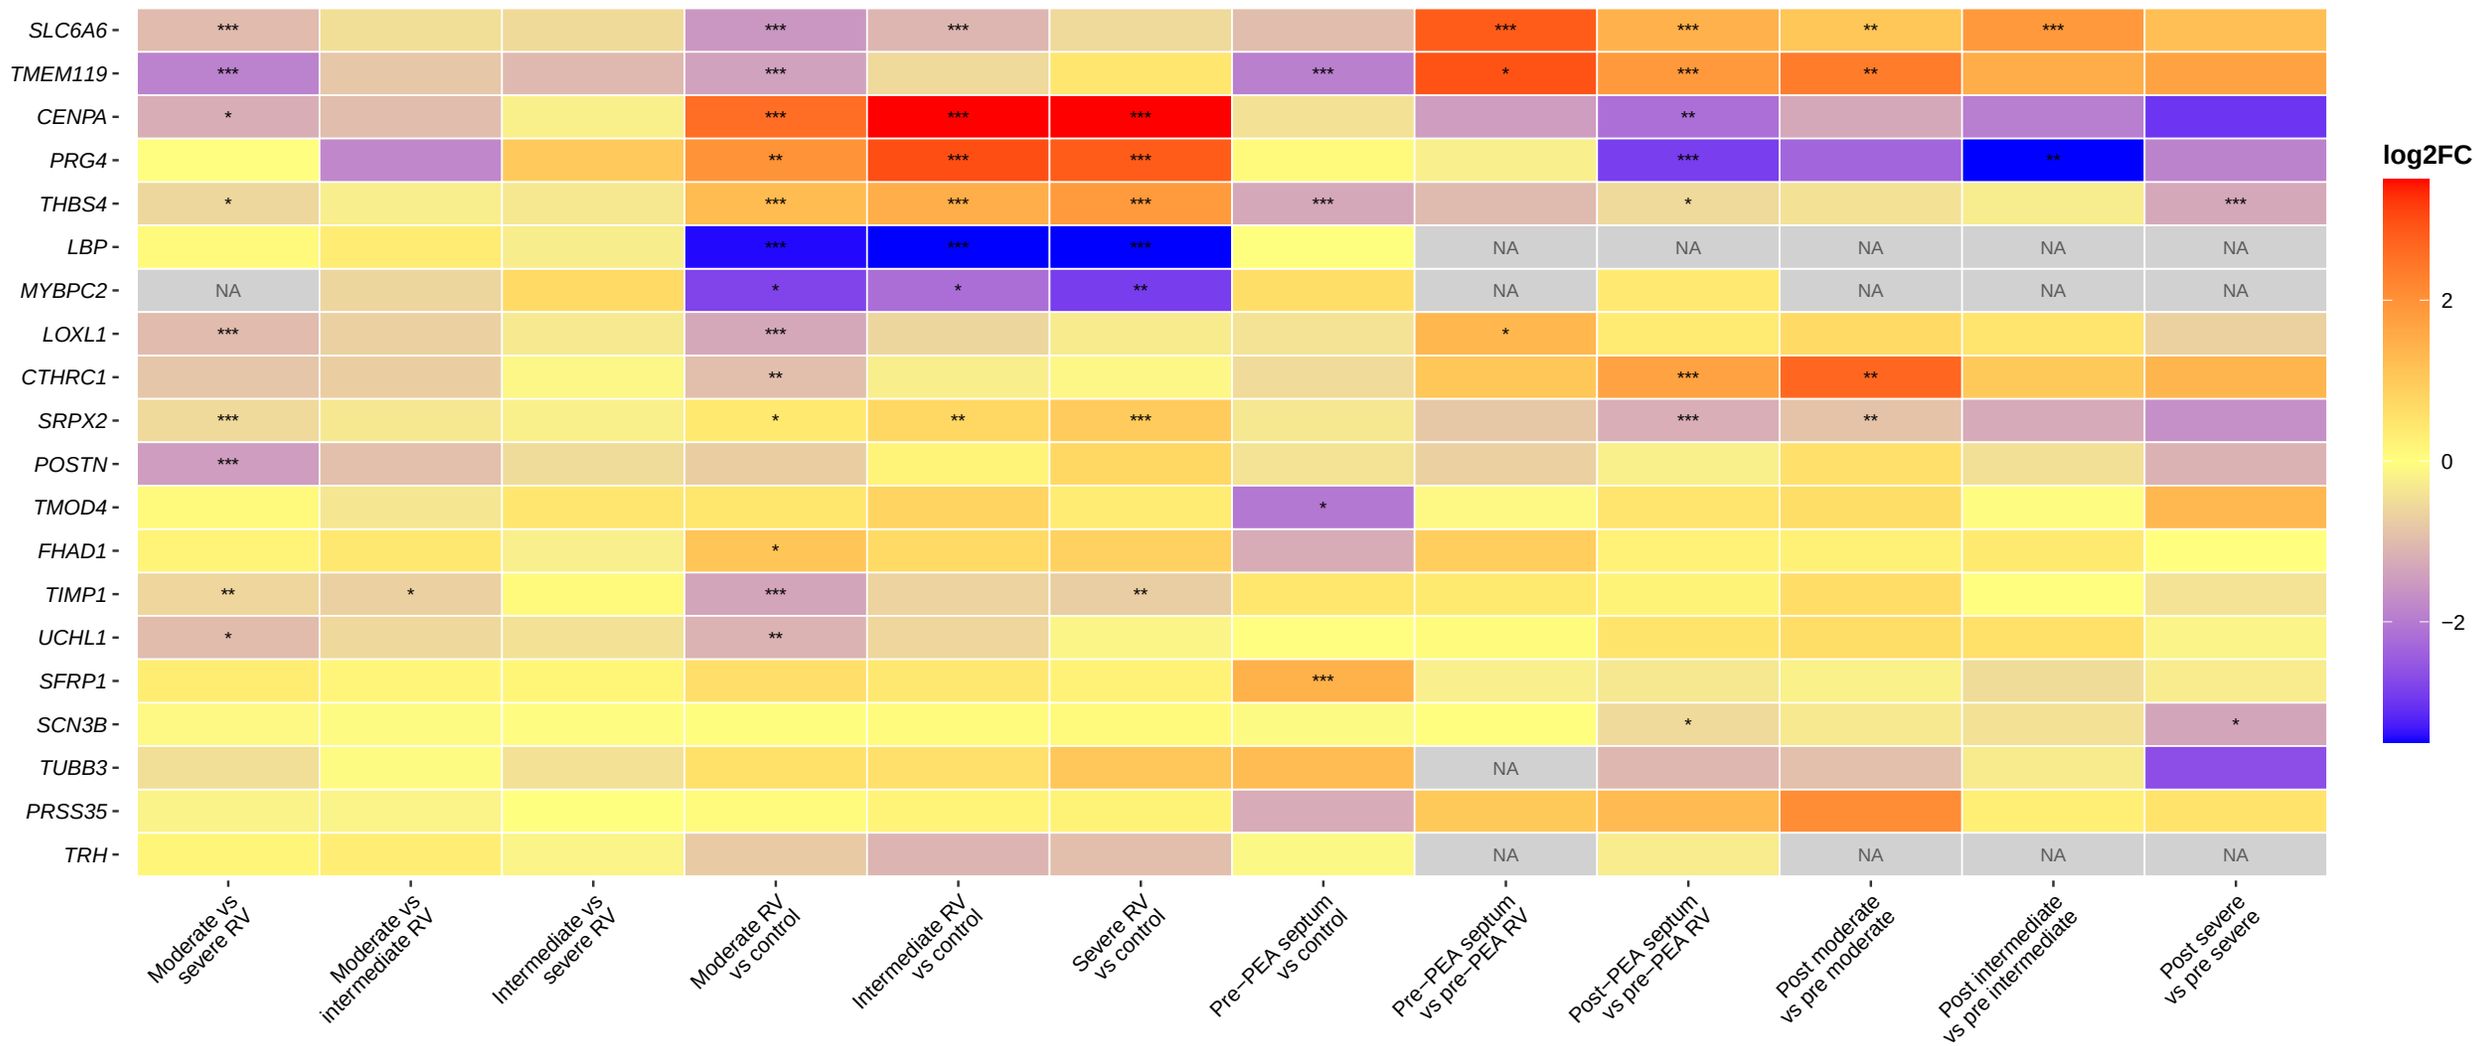
Figure 5 signature; n = 35 genes



B. Regional and post−PEA−associated contrasts

Point: mean; line: interquartile range across signature genes



C. Most recurrent CTEPH−supported genes (20/35)


All 12 contrasts; grey/NA = not reported or not estimable; Stars: padj only; * <0.05, ** <0.01, *** <0.001 (no FC cutoff)
